Quality gear for active enthusiasts and professional athletes who train year-round to thrive in winter.

At Swix, our heart lies in winter. But success on snow is never random. It's built when no one's watching – through wet spring runs, long summer sessions and crisp autumn mornings. Lifting heavier, pushing longer, staying consistent.

Because when winter comes, it all matters. To train year-round, you need apparel that works as hard as you do. Gear that handles the hours, the elements, and the effort. That's why we use our decades of experience from winter sports to develop high-performance clothing – trusted by elite athletes and dedicated enthusiasts alike.

From advanced layering systems to innovative materials, Swix delivers technical apparel made to support movement, manage intensity, and withstand the demands of real training – in real conditions. Because winter doesn't start with the first snowfall. It starts with the work you put in.

Embrace the cold with confidence in our Quantum Collection.

The Quantum collection is made for high-intensity cross-country skiing in demanding conditions. Constructed with lightweight Gore-Tex® Infinium™ softshell, it delivers windproof protection and excellent breathability—keeping you warm, dry, and focused when the pace is high. Stretch panels and articulated cuts ensure full freedom of movement, while ventilation zippers and breathable inserts help regulate temperature during intense sessions.

Clean lines, Scandinavian design, and seasonal colors combine performance with style. Minimalist, technical, and built to move—Quantum is for athletes who train with intent and expect gear that keeps up.

Swix x Jessie Diggins: gloves built for performance – with a touch of sparkle.

When one of the world's best skiers brings her vision to the design table, the result is something truly unique. Together with Jessie Diggins, we've created a new glove collection that blends world-class function with her signature style.

Developed for the demands of elite racing and intense training, every glove balances grip, warmth, and breathability with a sleek, lightweight fit. Built to perform at the highest level – whether you're chasing podiums or chasing tracks with friends.

Clean design, bold colors, and technical precision make this series stand out. Because gloves should do more than protect – they should inspire.

Because performance counts. And style matters.

			XXL	XXL	28	21.5	11

If a glove is too small, it will be uncomfortable. But if your glove is too big, your hand will have a hard time warming up the inside. So selecting the correct glove size is important.

How to measure for a glove:

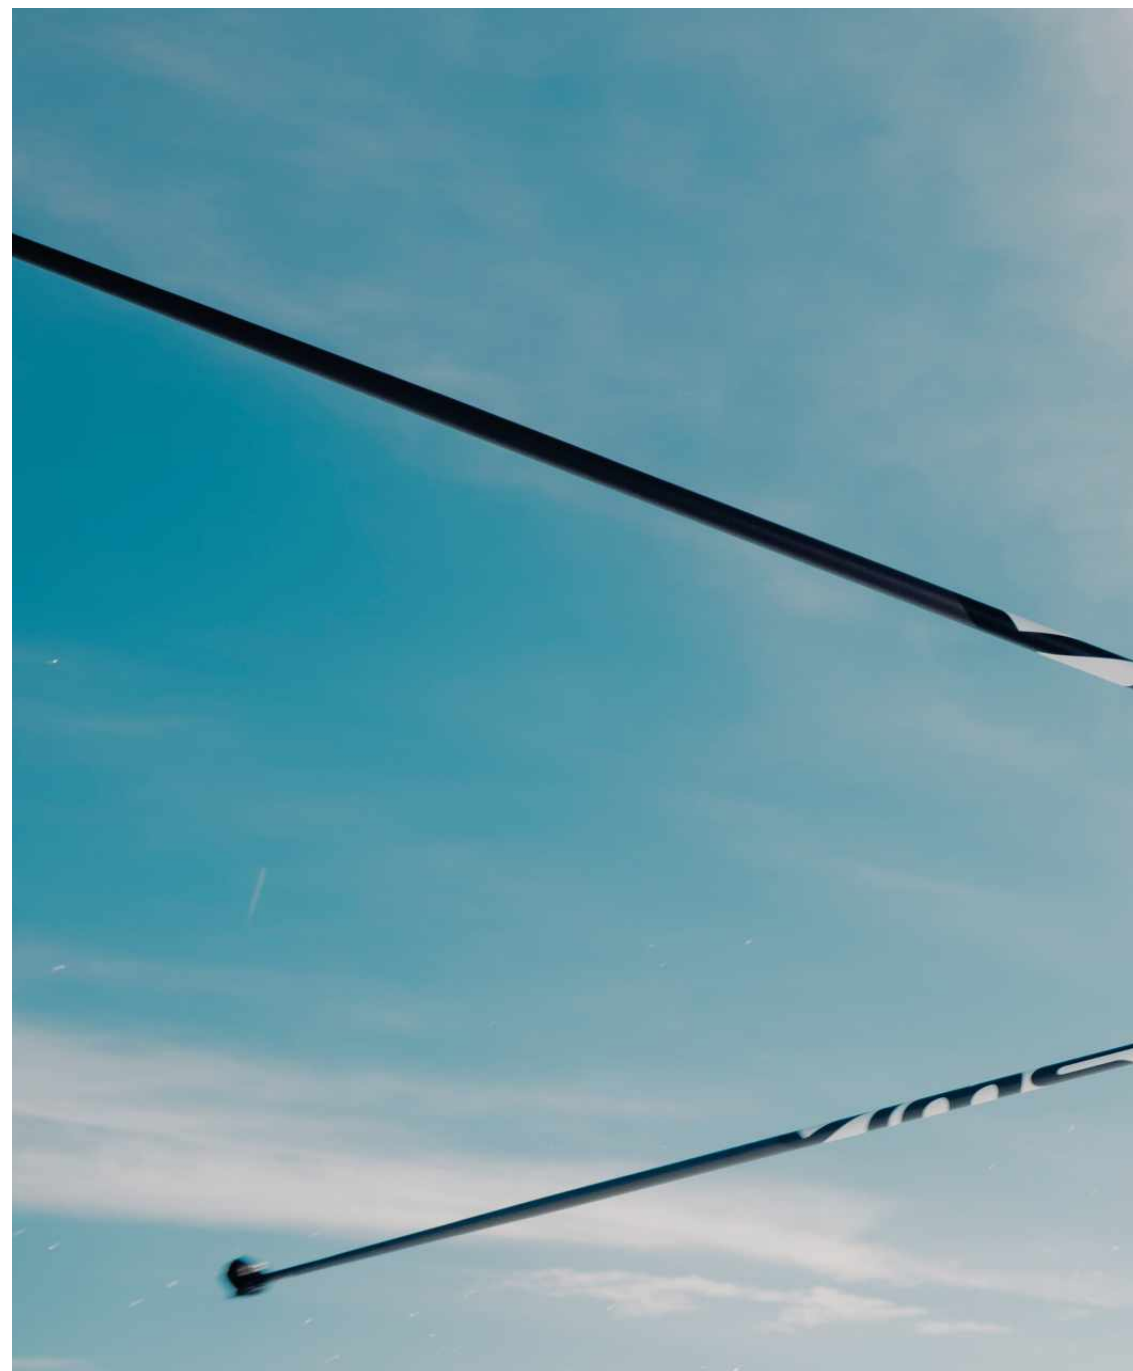

For best results, take measurements of your width, and length. Most gloves sizes are determined by width but some people have long fingers. Select your glove size to whichever is longer. When between sizes, go up a size.

How to measure for a mitten:

Take measurements of your hands width and length. Because mittens have more room, width is the most important measurement.

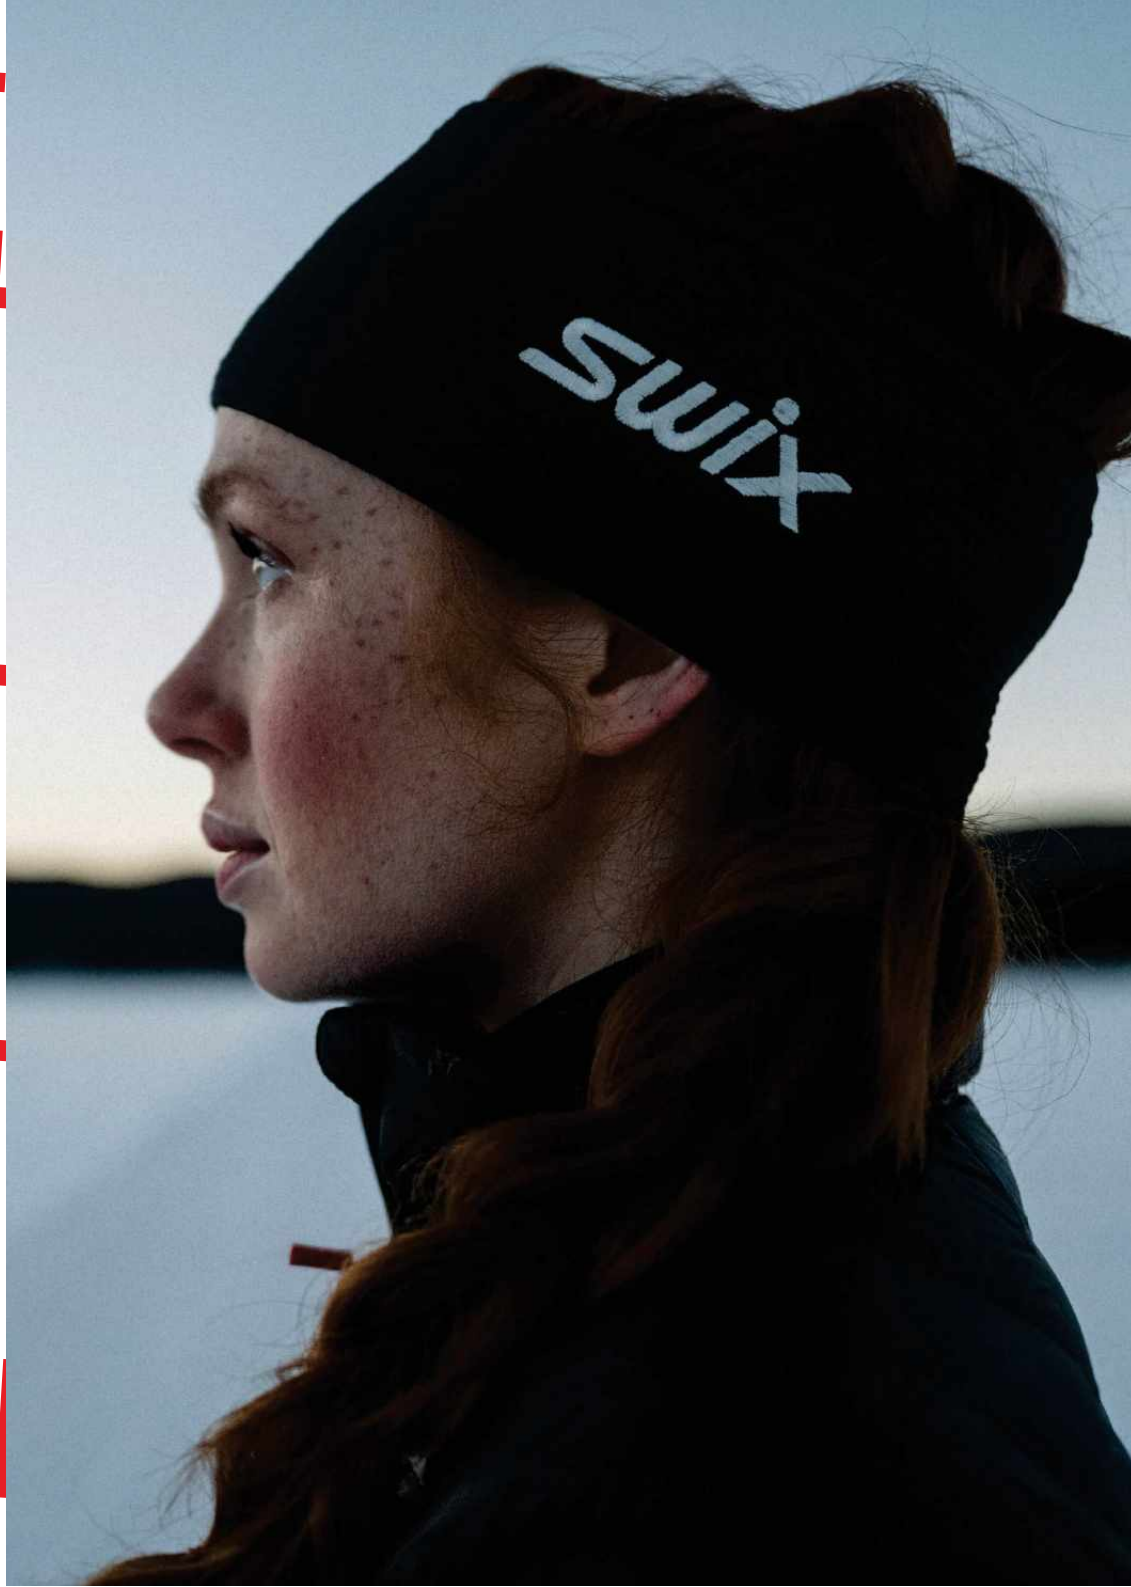

Junior glove sizing:

Please note that when junior and adult sizes overlap, junior fingers tend to be shorter and more narrow than adults. Since Juniors and Toddlers can vary significantly in size, we recommend using an age guidelines opposed to actual measurement of the child's hands and fingers.

Fitting Guide - Jackets

NTS - Next to skin

This fit is patterned to follow the body shape closely to enhance moisture management, thermal efficiency and to feel comfortable under layers.

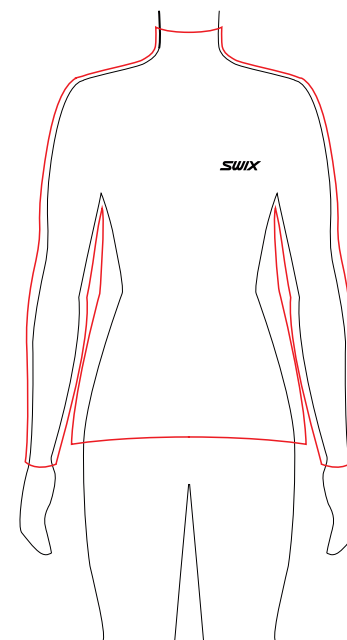

SLIM

This fit stays close to the body without being too tight. It's low profile eliminates bulk and moves with the body without restrictions. Fits a base layer underneath.

REGULAR

Comfortable fit that allows freedom of movement. It still provides shape but has room for extra layering.

RELAXED

This fit is cut loosely. Offers comfort and freedom of movement and allows for extra layering.

Fabric Technologies

PrimaLoft® Gold Insulation with Cross Core™ Technology – Maximum Warmth, Minimal Weight

PrimaLoft® Gold Insulation with Cross Core™ Technology is engineered for athletes who need uncompromising warmth without the bulk. By combining the proven performance of PrimaLoft's best-in-class synthetic insulation with NASA-developed aerogel particles, this innovation achieves exceptional thermal efficiency in a remarkably lightweight package. The aerogel, one of the lightest solid materials on earth, works by creating thermal barriers that lock in warmth while keeping weight to a minimum. The result is insulation that is ultra-light, highly compressible, breathable, and water-resistant—perfect for high-output activities in cold conditions.

For activewear, this means apparel that delivers consistent warmth, freedom of movement, and reliable comfort, even when wet. With PrimaLoft® Gold with Cross Core™, you can stay focused on performance, no matter the weather.

TENCEL™ Lyocell – Naturally Soft, High-Performance Fiber for Activewear

TENCEL™ Lyocell fibers are derived from sustainably sourced wood and produced in a closed-loop process that minimizes environmental impact. Known for their exceptional softness and smooth touch, these fibers bring a natural comfort that feels great directly on the skin—ideal for activewear and base layers.

Beyond comfort, TENCEL™ Lyocell offers excellent moisture management, absorbing and releasing moisture efficiently to help the body stay cool and dry during activity. The fibers are also breathable, lightweight, and strong, providing long-lasting performance without compromising on comfort. With its combination of sustainability, softness, and technical function, TENCEL™ Lyocell is perfectly suited for athletes and everyday movers who demand performance with a lighter environmental footprint.

REPREVE® Our Ocean® – Giving Plastic Waste a Second Life

REPREVE® Our Ocean® is a premium recycled fiber made from plastic bottles collected within 50 kilometers of coastlines in countries or regions lacking formal waste management. By capturing this plastic before it reaches the ocean, REPREVE® Our Ocean® helps reduce marine pollution while transforming waste into high-performance textiles.

Like all REPREVE® fibers, it is traceable and certified, ensuring transparency from collection to finished fabric. By choosing REPREVE® Our Ocean®, you support cleaner oceans and a circular approach to performance apparel—where sustainability and function go hand in hand.

GORE-TEX INFINIUM™ WINDSTOPPER® – Total Wind Protection, Maximum Breathability

GORE-TEX INFINIUM™ WINDSTOPPER® technology is designed for athletes and outdoor enthusiasts who need reliable protection against wind chill without sacrificing comfort. By blocking wind while remaining highly breathable, WINDSTOPPER® fabrics help regulate body temperature during high-output activities like running, skiing, or cycling.

Lightweight, flexible, and often combined with water-resistant treatments, WINDSTOPPER® garments provide freedom of movement and lasting comfort in variable conditions. Unlike traditional shells, they offer a soft, quiet feel that works perfectly in activewear where mobility and next-to-skin comfort are key. With GORE-TEX INFINIUM™ WINDSTOPPER®, you get windproof performance, optimal breathability, and lasting weather protection—so you can focus fully on your activity.

Merino Wool – Natural Performance for Every Activity

Merino wool is a premium natural fiber prized for its unique ability to balance comfort, performance, and sustainability. Unlike traditional wool, Merino fibers are exceptionally fine and soft, making them comfortable directly against the skin without any itch.

For activewear, Merino wool offers outstanding temperature regulation—keeping you warm when it's cold, and cool when it's warm. It also has excellent moisture management, naturally wicking sweat away while remaining breathable. Another key advantage is its odor resistance, allowing garments to stay fresher for longer, even during intense activity. Renewable, biodegradable, and durable, Merino wool provides a responsible performance solution that works just as well for high-output training as for everyday wear.

C0 DWR – PFC-Free Water Repellent Finish

C0 DWR (Durable Water Repellent) is a modern, eco-friendlier alternative to traditional water-repellent treatments. Unlike older C6 and C8 DWR coatings that rely on long-chain

fluorocarbons (PFCs), CO DWR is completely PFC-free, reducing harmful environmental impact while still providing effective protection against light rain and snow.

In activewear, CO DWR creates a surface finish that allows water to bead up and roll off, keeping garments lighter, drier, and more comfortable in changing weather conditions. While it may require occasional reproofing to maintain performance, it delivers the water resistance athletes need—without the use of persistent chemicals. With CO DWR, you get a responsible balance of performance and sustainability, supporting both outdoor activity and environmental care.

Thinsulate™ Insulation – Lightweight Warmth That Lasts

Thinsulate™ is a high-performance insulation designed to keep you warm without adding bulk. Made from unique microfibers that are much finer than traditional synthetic fibers, Thinsulate™ traps more air in less space, creating efficient thermal insulation that feels light, flexible, and comfortable.

In activewear, Thinsulate™ provides reliable warmth, breathability, and freedom of movement, making it ideal for gloves, jackets, and footwear used in cold weather. Unlike natural down, it maintains its insulating ability even when damp, ensuring consistent comfort in varying conditions. Durable, easy to care for, and trusted worldwide, Thinsulate™ delivers proven performance insulation for everyday wear and demanding outdoor adventures alike.

90/10 Duck Down – Lightweight Warmth, Premium Insulation

90/10 Duck Down describes a high-quality insulation blend consisting of 90% down clusters and 10% small feathers. This composition ensures excellent loft and insulation properties, as the fine down clusters efficiently trap warm air while keeping the material exceptionally light and compressible.

In activewear, 90/10 Duck Down offers an outstanding warmth-to-weight ratio, making it ideal for jackets and midlayers where performance, packability, and comfort are essential. Naturally breathable and soft, it provides long-lasting warmth with a premium feel. When responsibly sourced, 90/10 Duck Down is also a renewable and durable choice, delivering reliable protection for both everyday wear and demanding outdoor conditions.

YKK – The World's Most Trusted Zippers

YKK is the global leader in zipper and fastening solutions, known for its precision engineering, reliability, and durability. Founded in Japan in 1934, YKK has built a reputation for producing zippers that perform consistently under the toughest conditions—whether in outdoor gear, sportswear, or everyday apparel.

Every YKK zipper is designed with smooth operation, strength, and long-lasting performance in mind, ensuring garments function the way they're meant to. From lightweight coil zippers to water-resistant and heavy-duty versions, YKK offers a wide range of solutions tailored to activewear and technical apparel. When you see YKK, you know your product is equipped with quality you can trust, down to the smallest detail.

3-Layer Softshell – Durable Protection, Lasting Comfort

3-layer softshell is a technical fabric construction that combines three layers into one performance material. The outer layer provides durability and weather resistance, the membrane offers windproof and water-resistant protection, and the inner layer delivers comfort and moisture management.

This design creates a versatile fabric that is lightweight, breathable, and flexible, yet strong enough to handle tough conditions. The bonded construction ensures excellent freedom of movement without the bulk of traditional layering, making it ideal for active pursuits such as skiing, hiking, running, and cycling.

With its balance of protection, breathability, and comfort, 3-layer softshell is the perfect solution for athletes and outdoor enthusiasts who demand reliable performance in variable weather.

Polartec® Micro Fleece – Lightweight Warmth and Soft Comfort

Polartec® Micro Fleece is a premium fabric engineered to deliver warmth without weight. With its finely constructed fibers, it provides excellent thermal insulation while remaining highly breathable and quick-drying. The smooth, soft texture feels exceptionally comfortable against the skin, while the fabric's durability ensures long-lasting performance and easy care.

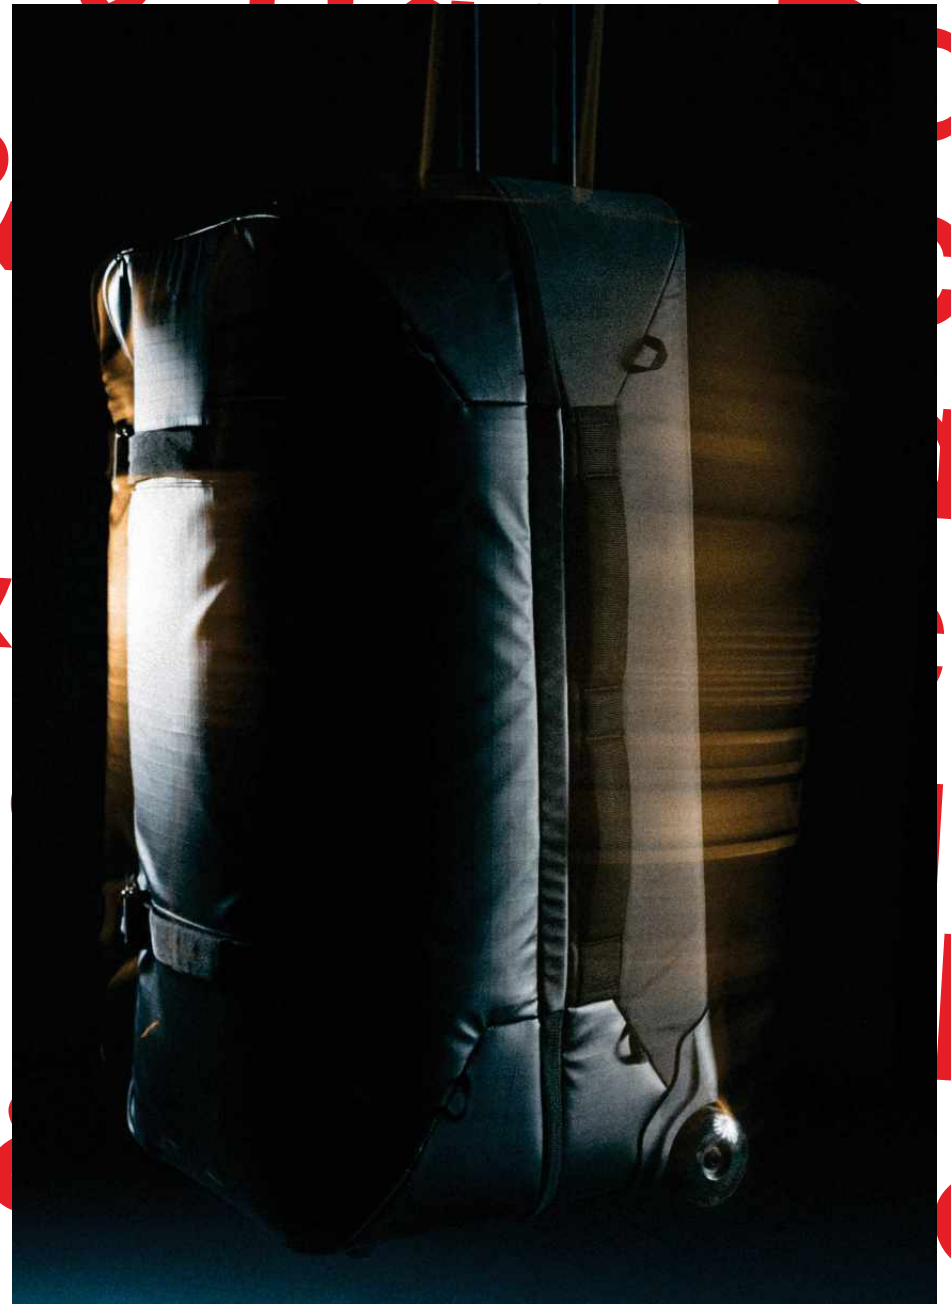

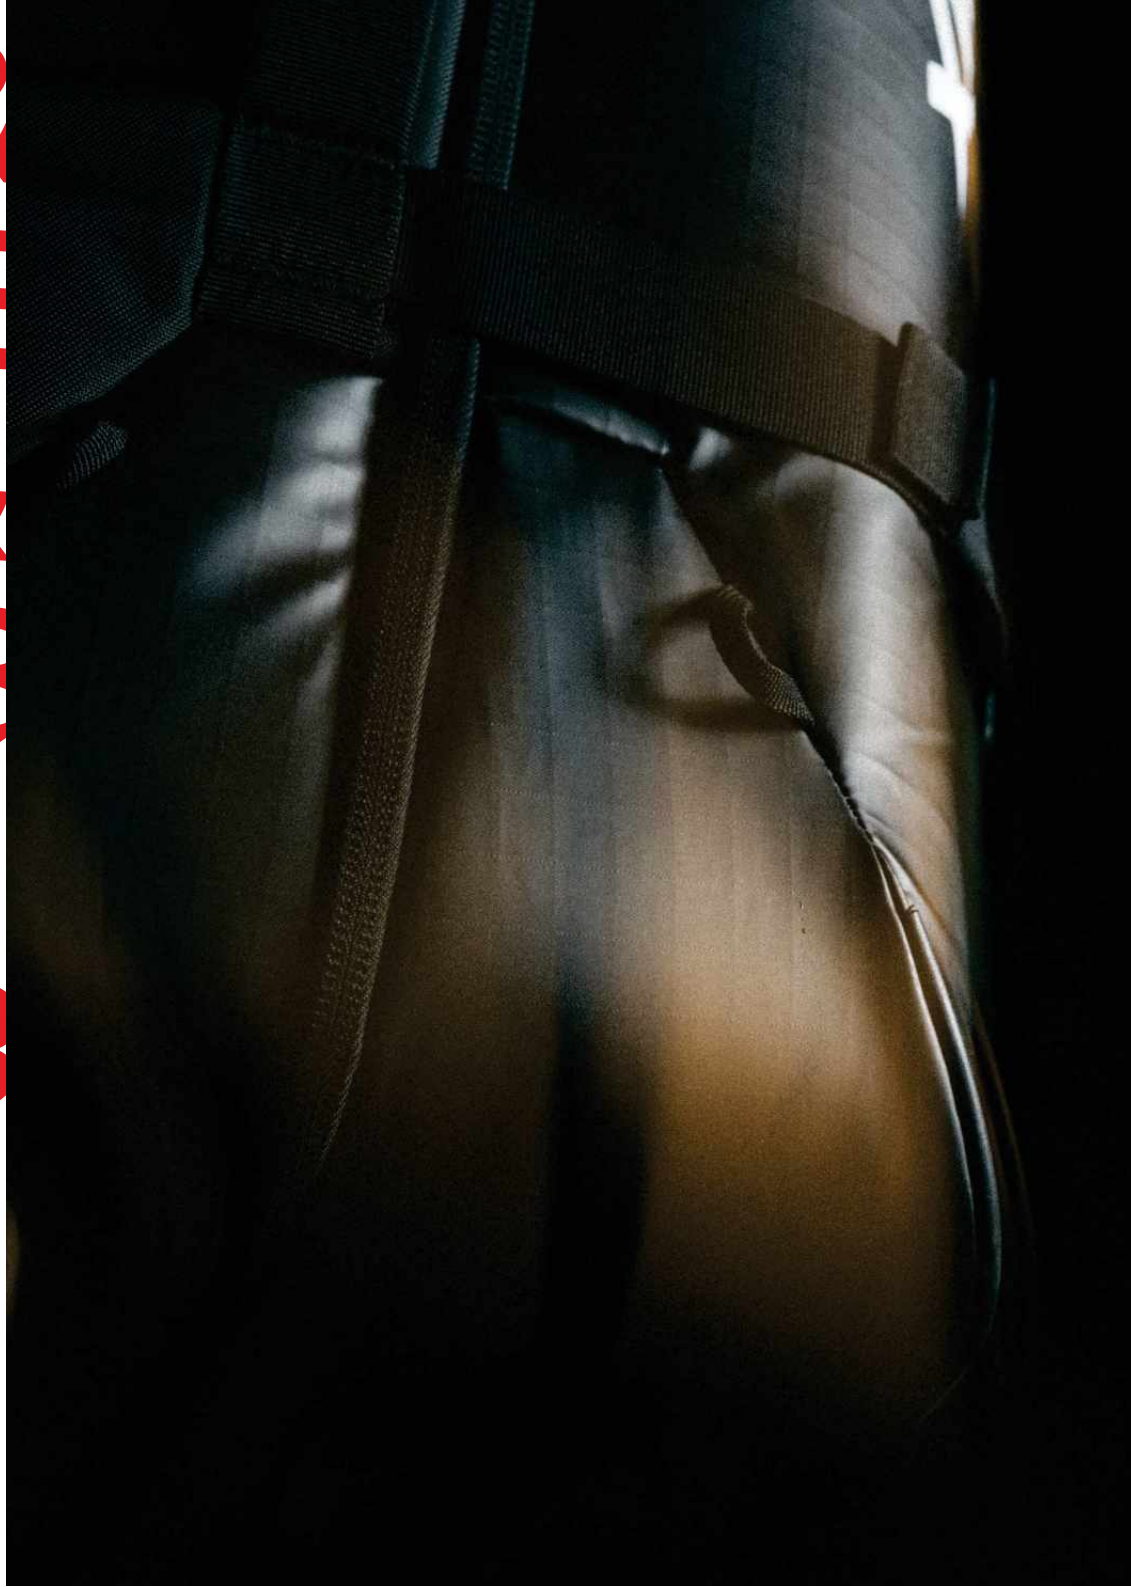

Light, versatile, and efficient, Polartec® Micro Fleece offers the perfect balance of warmth, breathability, and comfort, making it a trusted choice for active and everyday wear.

Closed-Loop System – Sustainable Production

A closed-loop system is a manufacturing process where almost all resources are recovered and reused, instead of being released as waste. In the case of TENCEL™ Lyocell, water and solvents used to turn wood pulp into fibers are recycled back into the system at a recovery rate of over 99%.

This minimizes environmental impact, reduces chemical waste, and makes the production far more sustainable than conventional methods.
